

**Stampack Xpress** allows designers and method planners to simulate forming processes for prototype, progressive die and transfer die tools.

The following processes are covered:

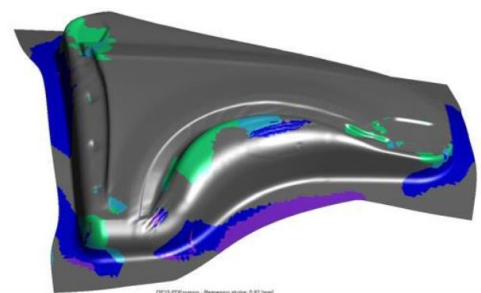

### Sheet metal forming simulation for tool designers

Stampack provides fast, easy-to-use and affordable solutions to virtually try out sheet metal forming processes. The usage of Stampack optimizes the part production and reduces the time to market significantly.

### Stampack Xpress Key Features

- terminology is corresponding with the language of toolmakers
- a clear and straightforward workflow
- requires no experience in finite elements
- requires no experience in materials science
- process definition is greatly simplified by automation tools
- Shell and Solid simulation in one package!
